

PART II
Enter Vulcan
Heliocosms 2014 – 2026
 (Solar Maximum to estimated Maximum)

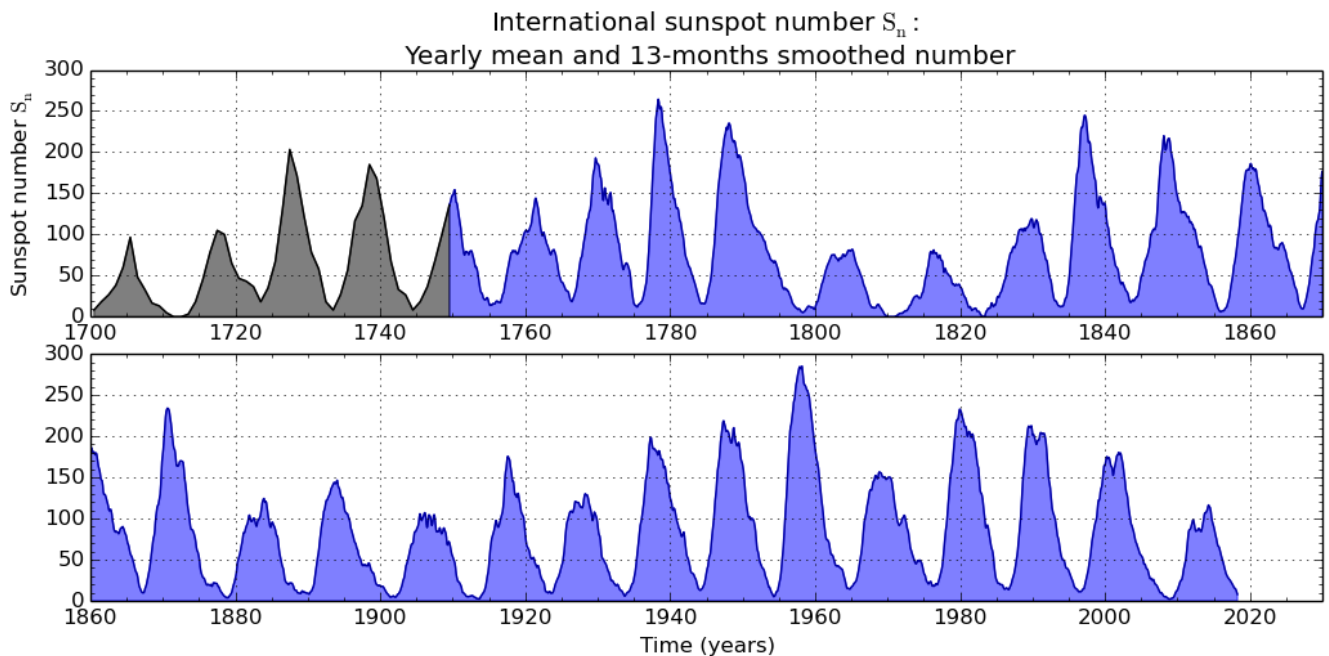

Until astronomers identify a phase-transition planet within the orbit of Mercury, or more likely solar plasma formations and cycles, it is useful to think of Vulcan as the graphic V-shaped solar sunspot cycle and determine where the individual 9-month gestation process falls –high radiation or low– and what this difference signifies. The life and purpose of the 5th kingdom human soul extends over many personality lifetimes.

Souls incarnate in groups.

This implies a lifespan longer than that of 4th kingdom human forms.

It becomes important to contextualize individual human lives within long solar cycles.

As per usual, I recommend using these Heliocosm cycles in meditation — as beacons for right timing and to “cement space” with the Divine Plan on Earth. Watchword: Let go, let God.

SILSO graphics (<http://sidc.be/silso>) Royal Observatory of Belgium 2018 November 1

All Heliocosms are both heliocentric and geocentric due to each planet’s conjunction or opposition in alignment with both Sun and Earth. They focus the energy associated with Sign Ingress and position from the Earth’s point of view by means of an exact Solar-Earth alignment with the planet at hand.

Ray One flows through the zodiacal signs Aries, Leo and Capricorn.

Ray One reaches Earth through Vulcan and Pluto, in association with β Ursa Major and Ray 3 (Saturn) rebuilding and refashioning.

Vulcan and Pluto govern the upheaval and clearing processes incident to the first initiation. In this regard, the distinguishable aspect of the pervasive influence of Neptune governing the 14-year generations also has a mass stimulating and supervisory role.

Vulcan rules the Signs Taurus, Virgo, and Aquarius.

These three signs are found predominating in the Heliocosms and in their Ascendants for Washington DC during these years. I include Gemini-Sagittarius for their Earth rulerships.

The years from 2014 to 2026 begin and end with the Jupiter Heliocosm in Leo; they begin and end with solar Maxima.

From the point of view of Washington DC, the three Ray-One Signs are found in the charts for annual Heliocosms from 2014 to 2026.

These three Signs are found present in all three major annual Heliocosms at the beginning and end of this period, in 2014 and 2026 respectively, when Jupiter returns to Leo. They cluster from 2021-26 in the Venus Heliocosm by position and by Descendant/Ascendant

Leo in particular is found in the Heliocosms for Washington DC from 2016 to 2019 (Current Era), and again from 2022 to 2024.

Jupiter in Leo is the sign opposite Aquarius which rules America's soul.

This Sign and Heliocosm established an important cycle in the foundation of the United States, which can be seen as still active. It also has a very strong relation to the nation of Russia.

Leo and Aquarius –centralization and decentralization– together call forth a response from the human and social environment to 'stage-manage' a cycle of challenge and opportunity in the formation of the Ego — personal and individual, or collective and national.

In individuals, these two Signs have an impact on the astral permanent atom (Leo) and the physical or etheric permanent atom (Aquarius).

Some Jupiter in Leo Heliocosms:

1754 Franklin's 5/ "Unite or Die" & 7/ Plan of Union at Albany Conference w/ Great Britain (♃♄♀♅♆ ♃)

1765 Boston Liberty Tree riot (8/14) and repeal of the Stamp Act 1766 3/19

1777 Articles of Confederation drafted after the Declaration of Independence, pass and are signed

1789 The Bill of Rights passed (9/25) in Philadelphia. 1790 4/17 Franklin dies (♃♅♆ ♃ ♄♀♅♆)

In Esoteric Astrology there is a strict distinction among Force, Energy, and Ray impact and influence.

These are related directly to the Three Fires, and to the Three Planetary Motions — Rotary-Orbital, Spiral-Cyclic, and Forward-Progressive.

Destructive Fire-by-Friction can only be overcome by Solar or Electric fires.

One can "work with" Energies, but one can only Align with Rays.

Solar alignment is everything in Esoteric Astrology.

Like the Moon rules oceanic tides and the element of water on Earth, the Alignment of Venus with Jupiter governs the sunspot cycle, the tides of Fire on the surface of the Sun.

In future we will be able to astronomically detect (and recognize) alignment impacts of Sirius on our Sun, perhaps via solar Birkeland currents impacting the Sun.

Alignment of Pluto-Saturn with Vulcan (Sun) governs solar relations with Humanity on Earth, often bringing a change of ruling 'dynasties' in historic time.

Pluto and Aries in the solar monad, aligned with Saturn and Leo governing the head center of our planet, affect world and national events.

This solar factor ties in once more with the three planets that the Moon veils — Vulcan, Neptune, and Uranus.

As we know, these respectively condition the physical/etheric, emotional/psychic, and mental/causal aspects of the integrated personality.

To understand Vulcan, it is helpful to contextualize it with the other two planets veiled by the Moon (and Sun).

Only Vulcan demonstrates pure Ray One.

Vulcan governs the path of evolution for the mass of humanity, burning forms into life and into death.

Uranus and Ray Seven demonstrate the lowest aspect of Ray One, either positively organizing and improving, or dissociative and disruptive.

In Humanity, Vulcan (via Mercury and Capricorn) impacts mass consciousness, fostering and refashioning human-animal instinct into intellect. This expresses the millenary work of the heliocentric planetary nodes of Mercury and Mars in Taurus/Scorpio ("fanning the flame of mind in animal man").

Uranus rules disciples through the heart center (Hierarchy) and vivifies the development, transition, and coordination of intellect with intuition. This expresses the millenary work of the heliocentric planetary nodes of Uranus and Venus in Gemini/Sagittarius.

These two (Vulcan, Uranus) are supervised by Neptune (heliocentric north planetary node in Leo) in our Ray Two solar systemic Life. It is one reason 'Neptune' is denominated the One Initiator, and Uranus the Hierophant.

The great mass of spiritual aspirants and disciples are influenced by Jupiter, Saturn and Pluto, whose heliocentric planetary nodes are found in Cancer/Capricorn.

Our Earth's perihelion is found at 12° Cancer, close to the present longitude of the star Sirius. The Sirian System, on the other hand, works through Taurus/Scorpio.

On the Fixed Cross, the Taurus/Scorpio horizontal arm governs astral desire and mental fixation, leading to a breakthrough into awareness and consciousness of the nature of the Soul

The vertical arm of Leo/Aquarius governs the ongoing pulsation between individual consciousness and identity and group consciousness and identity, leading to Soul control at the second initiation.

In Capricorn, the disciple learns to turn his back on the Light of the Soul in order to fight for its distribution downward and throughout the world.

Vulcan has a mass effect on Humanity via the Sun and Mercury, via relentless energetic impacts, solar and cosmic, to which inhabitants of our suffering planet are subject.

Vulcan has a discernible impact only for those on the Path — likewise with the higher aspects of Neptune and Uranus.

The Path begins (in Scorpio) where the path of Aspiration (either worldly ambition, or basic integrating spiritual aspiration) ends.

In nations, Vulcan brings forth the surge of political conflicts that Mercury is called upon to resolve into harmony.

Vulcan works with Mars, which is meant to establish contact and right relationship, rather than enhance unarticulated and hence illusory conflicts and confusion among peoples and nations.

Vulcan oversees the conflict between men of self-will and men of goodwill.

In the world as we know it as individual, the destructive side of Ray One is expressed more by Mars in relation with the collective instinctual, sluggish, reactionary and populist-nationalism tides of Pluto than by the reconstructing impulse of Vulcan.

In the solar and planetary Logocic worlds, Pluto presents the challenges, opportunities and tests for individualizing and awakening national Entities.

Vulcan must engage and transmute the destructive side of Ray One by using it to construct an appropriate foundation and vehicle for the Soul by the use of will, and the transmutation of the desire and astral nature into joy, one of the Four Immeasurable Meditations.

Vulcan also demands refashioning an initially 'lunar' and 'martian' physical vehicle with etheric energy and force, to enable it to demonstrate the resilience that can handle radiatory impacts from the Earth, Sun and beyond.

Esoteric Astrology deals with Consciousness and the soul, not so much with Form and the distracted personality. The Soul is solar in nature, related particularly to the Heart of the Sun and its Triangle of Neptune-Venus-Mercury.

The lower 'personality' nature of the solar Logos and that of our planet in incarnation are represented by Venus Cancer and the solar pitris of the Sun; and by Mercury [Scorpio] Capricorn, the IVth creative hierarchy of monads — humanity.

Neptune governs the signs Leo and Cancer as the soul ruler — Sun-Neptune and Moon-Neptune.

In the solar constitution, Jupiter Leo governs the Solar Flames (manasadevas) and Venus Cancer the Solar Pitris (manasaputras, sons of mind, agnishvatta pitris)

This helps us to understand why there is a choice between Venus and Jupiter (II^d and Vth Creative Hierarchies) under the supervision of Neptune at the second initiation. (the 2nd and 6th Rounds of the Earth Chain)

The soul expresses through the Three Fires, particularly solar fire; the monad through electric fire.

Venus and Jupiter also represent the relation of the soul in incarnation with the soul on its own plane.

These two (Venus, Jupiter) govern relations between the two soul rays of the soul — the soul per se, and the soul en rapport with the triad and egoic groups, the Primary.

Venus and Jupiter represent a choice, and a dynamic (ultimately not magnetic) relation between soul consciousness and the nondual formless awareness of the triad/monad.

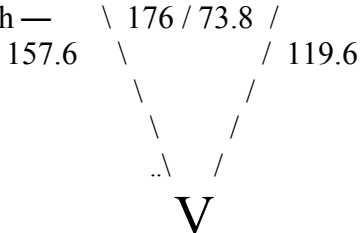

This relation becomes dynamic when considering the work of the Ego in the causal body (character development in the world), and secondly the work of the individuated consciousness or awareness with the egoic groups.

While there has been a long search for Vulcan as a planet within the orbit of Mercury, it will most probably be discovered as resonances in the plasma field close to the Sun by more advanced instrumentation and astronomical observation.

We all have access to tables of monthly and annual sunspot activity from the year 1749 to the present.

I would suggest placing any given individual's c.9-month natal gestation period (by conception and birth months) in the table of sunspot activity — with a side reference to the prenatal and postnatal maximum numbers, from c. 0. to 200.

For example, a May 1992 birth month —

157.6 \ 176 / 73.8 / 119.6

.. \ /

V

There is a good argument that those born at solar maximum or solar minimum have different energetic and physical constitutions with differing electro-magnetic and physiological resistances.

The ray of the mental body (the mental unit in unevolved humanity) often emerges before that of the personality.

There is good reason to expect that the Sunspot Minimum and Maximum has an impact on the astral permanent atom (Leo) and the physical or etheric permanent atom (Aquarius) during gestation.

The inherent and latent mental permanent atom (Aries) blends with the mental unit (Libra) and the causal body on the path of the Antahkarana.

This Aries work starts with the Quality relationship of Pluto with Vulcan.

This also implicates the higher work of Vulcan with Mercury bringing to consciousness the apparent but illusory opposition of Vulcan (the Law of Vibration) with Neptune (the Law of Sacrifice or Death).

HELIOCOSM TABLE — 2014 to 2046
